

Times have changed.

The current offering of Handheld thermo scanners DON'T account for recommended social distancing measures, they're time consuming AND require contact.

New public health regulations necessitate new tools and solutions to both optimise and adhere to the compliance investments required within organisations. Safeguard your organisation with the necessary measures to ensure business continuity remains at the core.

The solution: ADAPT TO CHANGE.

Incorporating social distancing, mass thermal camera solutions offer precise and fast measurement of heat for mass scanning. Organisations will need to adhere to non -contact measurement in line with governmental recommendations, in which this solution lends itself as the perfect solution.

The benefits of moving to a mass thermal camera solution include accurate temperature measurement which is both safe and effective. Non-contact screening ensuring social distancing measures are adhered to reducing risk. On a mass scale, time efficiency is sustained due to multi-person measurement. Abnormal alters in temperature can be visually identified and alerted. In addition to these benefits, non mask detection can also be identified.

The screening procedure can be automated to effectively and efficiently automatically diagnose high temperatures.

Data can be viewed in real time which can lead to actionable insights allowing for smarter future business decisions. Abnormal alters in temperature can be visually identified and alerted. In addition to these benefits, non mask detection can also be identified.

LOOKING AHEAD

Ramp up efficiency, enable boosted productivity, and reduce workplace illness.

Using IoT solutions from Ingram Micro, organisations can assure public safety and importantly comply with health policies and regulations whilst resuming business operations. Transform your operations and ensure that you that are prepared for a post Covid world.

Our dedicated IoT team of experts are available to support you. Contact our specialist team to find out how we, at Ingram Micro, can support your business needs.
